

# Layered Safety for Today's Schools

**When seconds matter, Response Technologies LTD delivers with the fastest D2R™ duress and emergency response systems on the market**

In an emergency situation, obtaining immediate help is not just important, it is often critical for saving lives. Seconds matter in *any* emergency response – and especially in schools today, where protecting students and staff is paramount. Creating environments that improve safety requires multiple layers of reliable safety protection and the fastest possible response. Response Technologies' Centurion Elite® offers a platform that supports gunshot detection, duress buttons, entry/exit monitoring and many other safety solutions from a single system.

**Build safety with layers of protection in your total duress and emergency solution – from NEW gunshot detection for active shooter situations to overall system support**

A layered system of protection incorporates reliable tools that not only thwart emergencies, but also prevent emergency situations or threats from advancing. The market-leading Centurion Elite® offers proven, complete emergency solutions to protect today's schools. This top protection tool works with your existing investments, such as access control systems and cameras, to enhance their effectiveness.

Choose your tools:

- **Gunshot Detection Sensor** — Instantly know when and precisely where a gunshot occurs within a facility to help stop an active shooter event. Our **new Gunshot Detection Sensor** works with Centurion Elite® to offer numerous advantages to schools:
  - **Fastest connection to a law enforcement response available** provides Direct-to-Responder (D2R™) notification in 2 seconds or less.
  - **Two-factor authentication** ensures that only true emergency events are reported to emergency responders. The sensor responds to both sound and change in the air pressure when a gunshot occurs to avoid false triggers.
  - **Self-contained, self-monitored reliability** – This is the only gunshot sensor that does not rely on a customer’s network or electrical power to the facility to operate. With a 5-year battery life and dedicated wireless infrastructure know that the system is built to work in any conditions.
  - **Cost effective** at an anticipated cost of 30% of competitors' prices.
- **Duress/Emergency Panic Buttons**—Because threats and violence can occur anywhere, anytime, equipping school staff with Wall-Mounted or Wireless Pendant Duress Buttons provides the confidence of an instant, direct connection to emergency assistance.
  - **Direct-to-Responder (D2R™) notification bypasses third-party monitoring** stations or security offices to go directly to emergency responders in 2 seconds or less.
  - **Does not rely on electrical power or a network** to operate securely with a 3- to 5-year battery-operated and wireless frequency.
- **Entry/Exit Monitoring** – Limiting access to a single point of entry during school hours increases perimeter security. Each egress point in the facility is equipped with a wireless transmitter that instantly alerts when a door is propped open or opened at an unscheduled time. These sensors can be quickly and economically retrofitted to new or existing doors.

**The proven Centurion Elite® Platform pulls everything together.**

Powerful individual components work together to provide unmatched total protection for your school system.

- **Unmatched, Instant Response** – Centurion Elite® offers the quickest **Direct-to-Responder (D2R™)** solutions on the market with immediate emergency notification to first responders within 2 seconds.
- **Notification in whatever way is best for you** – Using Elite Audiences®, you choose how to notify responders – whether it's by instant two-way radio or any combination of email, text message, phone or computer software.
- **All-in-one solutions can expand as funding becomes available.** Add to your existing systems or start with your most critical needs and as your needs expand.
- **Economical choice:**
  - The Centurion Gateway® can connect every facility within your district to a single Centurion Elite® for central management and the ability to spread costs across multiple locations.
  - **Combine your security platform with environmental monitoring**, such as monitoring the temperatures of freezers or server rooms, to make your system cost-effective.
