

## The Problem

One of the often overlooked pieces of a well thought out security strategy is controlling the flow of traffic through entry points within a facility. While a code requires certain numbers of doors and how they must be secured, many facilities lack the ability to monitor all of these entry points in a safe and secure way. While access control systems can be used in some cases, often times the rollout of such systems are cost prohibitive or not flexible enough for the facility's needs.

## Delivering an Immediate Response

Response Technologies' Centurion Elite® offers the quickest Direct to Responder (D2R™) entry and exit monitoring solutions on the market. Our line of wireless sensors can be deployed throughout a facility, campus, or even across the country and monitored from a single system. When triggered, the sensor will alarm the Centurion Elite® which will send an immediate emergency notification to the proper personnel for that particular incident.

Delivery methods can include any combination of email, text message, phone, computer software, or two-way radio. These delivery method combinations are designated in Elite Audiences®, which allow users to customize specific responses based on the sensor that is activated. With the Centurion Elite®, the user can assign all sensors to alarm in the same way or can customize each individual alarm to activate a different response.

Unique Notifications...

**PROPPED DOOR ALARMING** — In many places the flow of traffic through doors is a normal part of the day, however propping open of doors can create major security risks. With the Centurion Elite<sup>®</sup> a sensor can be placed on doors that will allow normal flow of traffic through the entry point, however if the door is propped open for a predetermined time an alarm will be sent to the proper responder. These alarms can be set to escalate if the alarm continues to trigger after a set time.

**DOOR OPEN/CLOSE ALARMING** — Sometimes you just need to know if a door opens or closes in your facility. It could be something like monitoring rooftop access, or if fire doors have been inadvertently closed. Whatever the reason, when the state of a door changes the \$ F O U V S J P C a n d M a r t i n U F notify the proper personnel of the change so the issue can be resolved.

**FIRE EXIT ALARMING** — The Centurion Elite<sup>®</sup> offers a wireless solution for fire exit alarms. Using our wireless sensors and Siren/Strobe combos any door can be easily outfitted to trigger a visual and audible deterrent when opened. The sensors can also be configured to send an additional alarm to responders to respond to the situation.

- Wireless sensors can be affixed to any standard door.
- D2R<sup>™</sup> communication allows users to bypass third parties and go straight to the responders within seconds.
- 24/7 sensor monitoring ensures your facility is always protected.
- Wireless sensors allow for quick and easy installation and expansion.
- Compatibility with Centurion Gateway<sup>®</sup> allows multiple facilities to be monitored from a single system.
